

Care doesn't have a coordination layer.

40M+ unpaid caregivers in the US — ~3× across EMEA — drown in the operational debt of running their family's health.

Today the pregnant daughter, the hypertensive father, and the burnt-out daughter live in fragmented siloed apps. Every health AI talks *to* one person. None talk *between* people.

- 40M
unpaid family caregivers in the US alone
- ~3×
that across EMEA — multi-gen households are the cultural default
- 0
existing AI products that coordinate care between family members

VitaCare: the world's first A2A care network.

Every family member runs a personal swarm of **six agents**. Their Diplomats coordinate *across people* over Google's A2A protocol. Consent-gated. Grounded. Pure Google stack.

-  Sentinel
watches vitals · fires triggers
-  Chronicler
longitudinal medical memory
-  Clinician
Gemini 2.5 Pro + Google Search Grounding
-  Concierge
MCP tools · Calendar · clinic · pharmacy
-  Diplomat
A2A handshake · ConsentGrid enforced
-  Voice
Cloud TTS Chirp 3 HD · in-browser, no telephony

The moat: Family Health Graph

Real **3,072-dimensional Gemini embeddings** with cosine retrieval. Pre-seeded with cross-generational facts that visibly influence the live Clinician. On a test run the Clinician said "*despite being on medication*" because the FHG surfaced the amlodipine fact — emergent reasoning only possible because the graph is real.

github.com/bayraktartahsin/vitacare · gravitilabs.com

The agent-to-agent protocol just opened the door.

Google's A2A protocol turned "agents talking to each other" from a research problem into a deployable spec. Healthcare coordination is the highest-value vertical for it — and nobody has shipped it yet.

- ~\$12B
addressable family-tier subscription market (40M US caregivers × \$25/mo)
- ~80M
multi-gen households across EMEA — VitaCare's culturally-native first market
- ~\$3T
global eldercare market the B2B Vita Praxis path expands into
- 0
competitors shipping consumer-facing A2A healthcare coordination today

VitaCare · 03 / 05

github.com/bayraktartahsin/vitacare · gravitilabs.com

Two distribution paths. One protocol.

B2C · Family Tier

\$24.99 / month per household

- • Up to 5 family members + caregiver mode for elders
- • Rides on existing Vita iOS distribution (23 locales, shipping)
- • 1-click upgrade path from Vita's free tier
- • Cost per Cascade scenario: \$0.009 — 95% gross margin

B2B · Vita Praxis

Per-seat SaaS to clinics

- • Doctor-side endpoint receiving A2A inbound from patient agents
- • Marketplace + Gemini Enterprise listing target post-hackathon
- • Same A2A protocol — no separate integration to build
- • Network effects: every clinic adds value to every patient swarm

Unfair distribution advantage: VitaCare doesn't need cold-start growth — it inherits Vita's existing 23-locale iOS distribution. Day-zero TAM is Vita's installed base.

VitaCare · 04 / 05

github.com/bayraktartahsin/vitacare · gravitilabs.com

Graviti Labs — already shipping health AI to 23 locales.

Built by a team that ships. VitaCare is the agentic layer on top of an existing product family — not a cold-start.

Vita

Voice + text health companion · iOS · 23 locales · shipping in production

VitaCare (this submission)

Agent-to-agent care network · live demo · ~8,000 LoC · 14 pytests + CI

Vita Praxis

Doctor-facing desktop app · B2B clinic side · receives A2A handoffs

Execution evidence (hackathon window, 3 days):

- · ~8,000 LoC Python + TypeScript on production Cloud Run, 8+ deployed revisions
- · 21 google.adk.agents.Agent instances (inspectable at /adk/swarms)
- · Real Gemini Search Grounding citations (heart.org / escardio.org / ahajournals.org)
- · Real 3,072-d Gemini embeddings in the FHG, pre-seeded, deterministically influencing the live Clinician
- · Real Cloud TTS Chirp 3 HD audio analysed via Web Audio for a real-amplitude waveform
- · 14 pytests pass · GitHub Actions CI · ConsentGrid enforced at retrieval layer
- · min-instances=1 on both Cloud Run services for zero cold-start risk during judging
